sustainable, earth-friendly consumer products

Water Soluble!

Doggie Waste Bags

100% environmentally friendly |
Biodegradable | Completely Sanitary |
Dissolvable in water | Durable in use

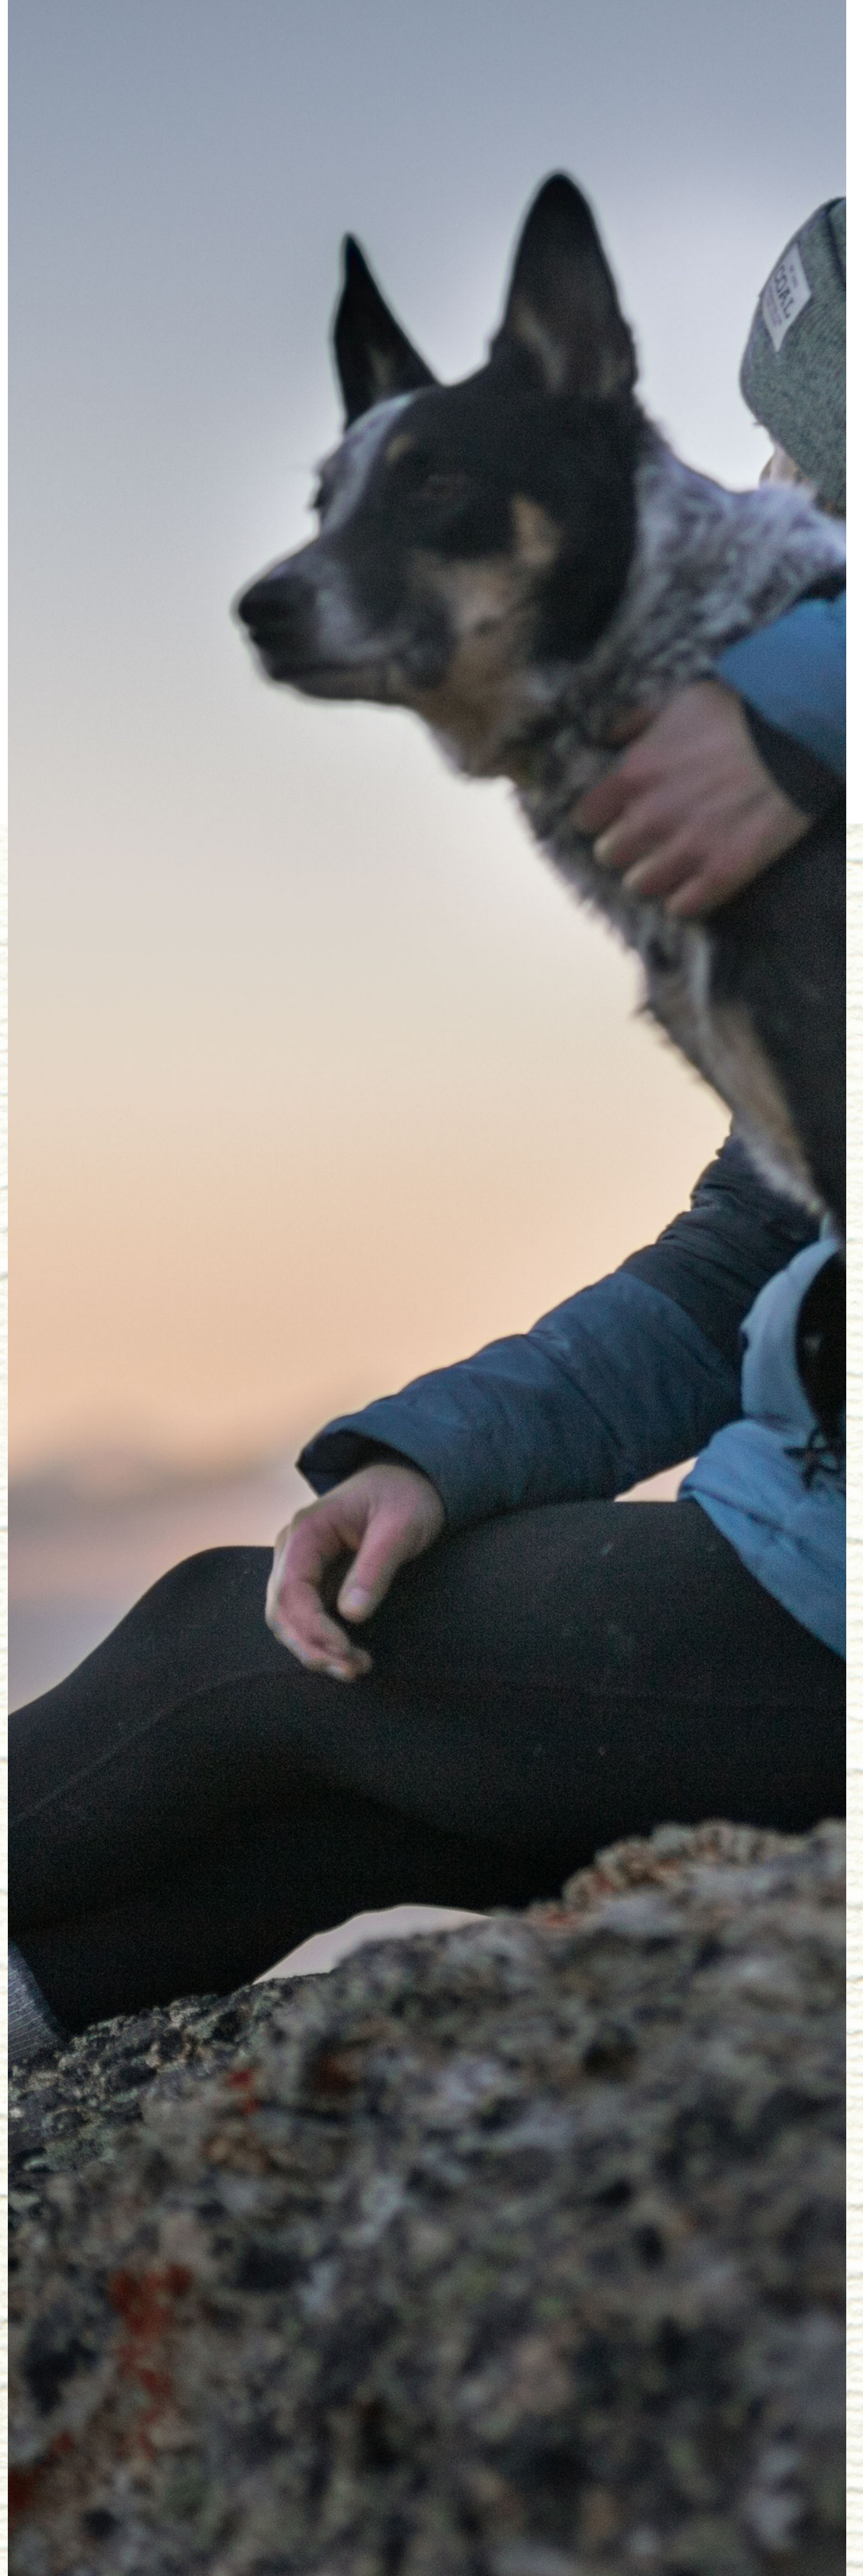

Non-toxic | Plastic and micro-plastic free

100% Earth-Friendly Dog Waste Bags

Our partners have invented a new raw material made by a synthesis from calcium carbide and natural substances. This material allows our bags to dissolve without contaminating the water or environment. We use this material as an alternative to plastic that can take up to 500 years, while contaminating our planet.

Our products are based on patented technology. It is derived from natural substances, which results in an Environmentally Friendly and Water Soluble product.

We Aim to Replace Plastic

Envirowise Doggie Waste Bags are created for individuals who care for the earth as much as they do for their furry loved ones. Envirowise Doggie Waste Bags are 100% environmentally friendly, hot water soluble, biodegradable and completely sanitary/durable. Thanks to this revolutionary formula, the non-toxic, non-plastic product can be discarded in the toilet and flushed, or the earth will decompose the product with ease without leaving a trace.

Transform to Sustainability

A Call to Action

500B

500 billion+ plastic animal waste bags are used annually worldwide.

Many environmentally-conscious dog owners make sure to pick up biodegradable dog waste bags. However, many of these bags are made with oxo-biodegradable material, extremely harmful to our environment.

500+

One plastic bag takes 500+ years to degrade in a landfill.

Comparison of standard plastic bags vs. Envirowise eco-friendly bags

	<i>Envirowise bags</i>	<i>Standard bags</i>
Time to decompose	< 180 days	500+ years
Dissolvable in water	✓	✗
Biodegradable	✓	✗
Microplastics	✗	✓
Biodegradability certification	ISO 14855-1:2012	✗
